

USE-CASE FLOW SPECIFICATION

Use Case: UC-02 Configure Feature Flag

Preconditions

1. The user is authenticated.
2. The feature flag already exists in the system.
3. The user has permission to configure the feature flag.

Postconditions

1. The feature flag configuration is successfully updated.
2. The updated configuration is stored by the system.
3. The configuration change is recorded in the audit log.

Main Success Scenario

1. The user selects **Configure Feature Flag**.
2. The system displays the available feature flags.
3. The user selects the feature flag to configure.
4. The system displays the current configuration values.
5. The user modifies the required configuration values.
6. The system validates the entered configuration values.
7. The user submits the updated configuration.
8. The system saves the new configuration.
9. The system records the configuration change in the audit log.
10. The system displays a confirmation message.
11. The use case ends successfully.

Alternate Flow

5a. Invalid Configuration Value

1. The system detects that one or more configuration values are invalid.
2. The system displays an error message identifying the invalid value.
3. The user corrects the configuration value.
4. The system validates the value again.
5. If the value is valid, the main success scenario continues from Step 7.
